Rig Check National Institute for Occupational Safety and Health 2012 Rig Check was developed by the National Institute for Occupational Safety and Health (NIOSH) in partnership with safety experts from the oil and gas extraction industry. It is made up of 35 inspection forms. The forms are designed to be used by rig workers to document the inspection of tools and equipment commonly found on rotary and workover rigs. Each inspection form includes instructions for assessing and recording the condition of the equipment. When applicable, relevant federal regulations and industry recommended practices are included. The Rig Check inspection forms are an excellent training tool for short service employees, who may not be familiar with the tools and equipment found on oil and gas rigs. Small companies whose safety and health resources are limited may find Rig Check useful for enhancing their HSE programs. The forms can also be downloaded from the NIOSH website at: www.cdc.gov/niosh/programs/oilgas/products.html.

Rig Specification and Evaluation Booklet Amoco Oil Company "The purpose of the "Rig Specification and Evaluation Booklet" is threefold. The first is to assist in determining which rigs, often from a large group offered, have obvious equipment deficiencies which would render them unsuitable for the well under construction. This function is fulfilled by the "Specification" section. The second function is to determine by means of an on site inspection those rigs whose equipment maintenance, condition, and personnel make them capable of efficiently performining the work planned. This function is fulfilled by the "Inspection" section. The third section, "Acceptability Test", is intented to be applied once the final rig choice has been made. This section provides performance tests, more detailed inspections, and other criteria which the rig should pass prior to the final acceptance by Amoco. Realistically, depending on the location and status of the rig, there are times it will not be practical to perform some of the testsgiven in the "Acceptability Test" section prior to putting the rig on contract. It is the intent, however, that whenever possible this be done. To be truly effective, teh "Acceptability Test" must be mentioned in the "Tender for Bids" as a condition which must be met prior to the contract becoming effective"--Leaf 1.
