[Archeologia e Calcolatori, 34.1, 2023](#) Agostino Sotgia 2023-07-21 Il numero 34.1, 2022 della rivista Archeologia e Calcolatori è caratterizzato dalla pubblicazione degli Atti di due Convegni internazionali. Il primo riguarda la sedicesima edizione del Convegno ArchoFOSS, dal titolo “Open Software, Hardware, Processes, Data and Formats in Archaeological Research”, svoltosi a Roma il 22-23 settembre 2022 presso la sede del Digilab della Sapienza Università di Roma. Gli Atti, curati da Julian Bogdani e Stefano Costa, comprendono 21 articoli che ben testimoniano il successo e la vitalità dell’iniziativa, nata nel 2006, cui si è più volte dato spazio nelle pagine della rivista. La seconda parte del volume, che raccoglie 14 contributi, è stata curata da Carlo Citter e Agostino Sotgia ed è dedicata agli Atti della Sessione speciale “Modelling the Landscape. From Prediction to Postdiction” della settima edizione della Landscape Archaeology Conference (Iaşi, Romania 10-15 September 2022). Si tratta di un tema dedicato all’uso dei modelli per lo studio dei paesaggi antichi, considerato sia attraverso l’approccio predittivo “tradizionale”, perché in uso dagli anni Novanta, sia attraverso quello postdittivo, che i curatori definiscono più “sperimentale”.

Evaluating IT Projects Eriona Shtëmbari 2017-11-20 Project management disciplines have been a part of IT for many years. Why then, are so many challenges still directly associated with how a project is managed? Many projects fail for a myriad of reasons; most, however, stem from poor or inadequate project evaluation and performance appraisal, while, improved project planning and direction is considered to be one of the key factors to IT project success.

Eriona Shtëmbari arranges evaluation methods and techniques into three groups, managerial-financial-and-development. This book explores the process of project evaluation and the purposes of evaluation, given its strong relationship to the success of the project. It examines IT project evaluation; identifies methods and techniques to be used throughout the project life cycle; examines the benefits of project evaluation and proposes a systematic approach/framework of project evaluation to serve as a tool for successful project management. Shtëmbari analyses the most up-to-date research relating to the process and methods/techniques of project evaluation, throughout the project life cycle. From the systematic literature review, she identifies the most usable methods and techniques in project evaluation and focuses on the adequacy of these methods and techniques in the service sector. The theoretical underpinning of the book, serves as a base to interpret the interviews in the case study and build a theory as to how the project evaluation context relates to the proposed scientific theory. The findings in this book provide solutions for practitioners to help them boost the evaluation framework and consequently improve their IT project management.

Bibliometrics and Citation Analysis Nicola De Bellis 2009-03-09 Can the methods of science be directed toward science itself? How did it happen that scientists, scientific documents, and their bibliographic links came to be regarded as mathematical variables in abstract models of scientific communication?

What is the role of quantitative analyses of scientific and technical documentation in current science policy and management? Bibliometrics and Citation Analysis: From the Science Citation Index to Cybermetrics answers these questions through a comprehensive overview of theories, techniques, concepts, and applications in the interdisciplinary and steadily growing field of bibliometrics. Since citation indexes came into the limelight during the mid-1960s, citation networks have become increasingly important for many different research fields. The book begins by investigating the empirical, philosophical, and mathematical foundations of bibliometrics, including its beginnings with the Science Citation Index, the theoretical framework behind it, and its mathematical underpinnings. It then examines the application of bibliometrics and citation analysis in the sciences and science studies, especially the sociology of science and science policy. Finally it provides a view of the future of bibliometrics, exploring in detail the ongoing extension of bibliometric methods to the structure and dynamics of the World Wide Web. This book gives newcomers to the field of bibliometrics an accessible entry point to an entire research tradition otherwise scattered through a vast amount of journal literature. At the same time, it brings to the forefront the cross-disciplinary linkages between the various

fields (sociology, philosophy, mathematics, politics) that intersect at the crossroads of citation analysis. Because of its discursive and interdisciplinary approach, the book is useful to those in every area of scholarship involved in the quantitative analysis of information exchanges, but also to science historians and general readers who simply wish to familiarize them

Book Was There Andrew Piper 2012-10-12 Andrew Piper grew up liking books and loving computers. While occasionally burying his nose in books, he was going to computer camp, programming his Radio Shack TRS-80, and playing Pong. His eventual love of reading made him a historian of the book and a connoisseur of print, but as a card-carrying member of the first digital generation—and the father of two digital natives—he understands that we live in electronic times. Book Was There is Piper’s surprising and always entertaining essay on reading in an e-reader world. Much ink has been spilled lamenting or championing the decline of printed books, but Piper shows that the rich history of reading itself offers unexpected clues to what lies in store for books, print or digital. From medieval manuscript books to today’s playable media and interactive urban fictions, Piper explores the manifold ways that physical media have shaped how we read, while also observing his own children as they face the struggles and triumphs of learning to read. In doing so, he uncovers the intimate connections we develop with our reading materials—how we hold them, look at them, share them, play with them, and even where we read them—and shows how reading is interwoven with our experiences in life. Piper reveals that reading’s many identities, past and present, on page and on screen, are the key to helping us understand the kind of reading we care about and how new technologies will—and will not—change old habits. Contending that our experience of reading belies naive generalizations about the future of books, Book Was There is an elegantly argued and thoroughly up-to-date tribute to the endurance of books in our ever-evolving digital world.

The Scientific Article in the Age of Digitization John Mackenzie Owen 2006-11-18 This book outlines the consequences of digitization for peer-reviewed research articles published in electronic journals. It is argued that digitization will revolutionize scientific communication. However, this study shows that this is not the case where scientific journals are concerned. Authors make little use of the possibilities offered by the digital medium; electronic peer review procedures have not replaced traditional ones, and users have not embraced new forms of interaction offered by some electronic journals.

Outcomes in Clinical Trials Martin Kolb 2013-12-01 The traditional end-points for clinical studies of lung diseases were based on functional parameters. Their value as surrogate markers for disease activity and progression has been increasingly questioned by scientists, carers, regulatory agencies and funding bodies. Novel tools and methods with regard to biomarkers and patient-reported outcomes have made these parameters emerge from their status as interesting secondary end-points and become potential primary outcomes for clinical trials. Nevertheless, their relevance and validity still needs to be proven. This issue of the European Respiratory Monograph describes the current status regarding end-points in all relevant areas of pulmonary medicine.

How to Get Published and Win Research Funding Abby Day 2023-06-19 Most journal articles and research proposals are rejected. That represents a waste of everyone’s time, energy, and spirit, especially now when, more than ever, academic careers are precarious. In this practical book, Professor Abby Day addresses these two inter-related and most challenging areas for academics and researchers in their professional careers: how to secure research funding and how to get research published. Reviewers, unpaid and often unappreciated, are over-stretched with their regular academic jobs, and increasingly reluctant to spend time reading poorly constructed papers or proposals. As fewer reviewers are available, the waiting time for a decision increases. Everyone loses. It doesn’t have to be like that. Professor Day’s ground-breaking strategy covers both publishing and funding challenges in similar, yet distinct ways. Lack of time? Conflicting priorities? No idea where to start or what matters most? This book explains how to overcome these and other common obstacles to successful publication and funding. For the first time, one book covers both activities, with practical guidance for setting your strategy and purpose, identifying the right publisher or funder, and understanding your audience and the key criteria for success, as well as helpful advice for writing and managing the challenges of an academic career. This book draws on the first and second editions of two international bestsellers, How to Get Research Published in Journals and Winning Research Funding. Based on original research with editors, funders, and successful academics, plus two decades of running international workshops on publishing and funding, Professor Day has now updated and merged these two critically acclaimed texts. This book is essential reading for graduate students and early career faculty members, who will gain new and effective insights and strategies to secure funding and publication opportunities to help develop their academic careers.

Research Methods for Digital Work and Organization Gillian Symon 2021-10-21 Digital work has become increasingly common, taking a wide variety of forms including working from home, mobile work, gig work, crowdsourcing, and online volunteering. It is organizationally, interpretively, spatially, and temporally complex. An array of innovative methodologies have begun to emerge to capture this complexity, whether through re-purposing existing tools, devising entirely novel methods, or mixing old and new. This volume brings together some of these techniques in an accessible sourcebook for management, business, organizational, and work researchers. It presents a range of innovative methods which capture and analyse digitally-related work practices through reflexive accounts of real-world research projects, and elucidates the range of challenges such methods may raise for research practice. It outlines debates and recommendations, and provides further reading and information to support research practice. The book is organised in four sections that reflect different areas of focus and methodological approaches: working with screens; digital working practices; distributed work and organizing; and digital traces of work. It then concludes by reflecting on the methodological issues, research ethics, requisite skills, and future of research given the intensification of digital work during a global pandemic that has impacted all aspects of our lives.

Harry White and the American Creed James M. Boughton 2021-11-30 The life of a major figure in twentieth-century economic history whose impact has long been clouded by dubious allegations Although Harry Dexter White (1892-1948) was arguably the most important U.S. government economist of the twentieth century, he is remembered more for having been accused of being a Soviet agent. During the Second World War, he became chief advisor on international financial policy to Secretary of the Treasury Henry Morgenthau, a role that would take him to Bretton Woods, where he would make a lasting impact on the architecture of postwar international finance. However, charges of espionage, followed by his dramatic testimony before the House Un-American Activities Committee and death from a heart attack a few days later, obscured his importance in setting the terms for the modern global economy. In this book, James Boughton rehabilitates White, delving into his life and work and returning him to a central role as the architect of the world’s financial system.

The Changing Landscape for the Libraries and Librarians : Issues & Challenges Dr DD Lal 2022-03-11 A smart library is an information center with networks of many libraries and their services in a larger informational ecosystem around the globe. The Libraries are adding new, digital resources and services while maintaining most of the old, traditional resources and services. Now the role of libraries, information services, the relationship between a library and users is changing significantly. Traditional services of a library are modified and enhanced in an online environment. The proposed book emphasizes the importance for a library to be flexible to changing needs and to adopt new technologies rapidly. With the emergence of new technologies, the traditional library, acting as a medium for sharing information, needs an integral refinement in its processes. This transformation will bring in efficiency and minimize human error in the processes with the help of smart gates, material location finders, and smart check-out booths to automate the processes of controlling access, locating items as well as issuing/returning of materials. The smart library focuses on the use of technology in a library and is designed to be a very collaborative learning environment, where participants are encouraged to contribute ideas and information. Smart library improves traditional and non-traditional library services, improve users' library experience and enhance opportunities for students learning. Libraries are facing increased expectations from

users, and challenges of developing technologies including Web 2.0, Web 3.0, ebooks, digitations, and a problem of archiving digital content. Webbased technology provides users and information professionals with powerful and flexible tools for information dissemination.

The Integration of Internet of Toys in Early Childhood Education Sarika Kewalramani 2023-03-31 This book offers a fresh look at recent developments in policy, curricula and pedagogical discourse around children's play with Internet of Toys (IoToys). By expanding the notion of digital and smart play perspectives in early childhood education, the authors critique and develop the broader subject area of IoToys play to better serve its end users. The book brings together research from across three different countries: Australia, Norway and England. It offers tangible examples of how one can use IoToys to build children's social skills, emotional intelligence, sense of achievement, collaboration and aspects of STEM and design play thinking processes. The learning stories of children's IoToys play will deliver a comprehensive review of how practitioners and parents can come together to build communities of practice for (re)enhancing children's learning and growth using evolving technology-based play and engage in paradigmatic debates. Readers as a result will better appreciate the growth in pragmatic applications of technologies together with theoretical perspectives. The book will be a valuable resource for any academic or practitioner just beginning to understand the complexities and success stories of integrating IoToys for children's playful learning.

Object Lessons and Early Learning Sharon E. Shaffer 2018-07-11 The twenty-first century is a time of change for early learning in museums, due in part to society's evolving view of childhood, from an age of innocence to understanding the robust learning that defines the first years of life. This perspective is a catalyst for international conversation and continues to raise attention and interest across society. Object Lessons and Early Learning leverages what is known about the cognitive development of young children to examine the power of learning through objects in museum and heritage settings. Exploring the history and modern day practice of object-based learning, Shaffer outlines the rationale for endorsing this approach in both formal and informal learning spaces. She argues that museums, as collecting institutions, are learning spaces uniquely positioned to allow children to make meaning about their world through personal connections to cultural artifacts, natural specimens, and works of art. A range of descriptive object lessons, inspired by objects in museums as well as from the everyday world, are presented throughout the text as examples of ways in which children can be encouraged to engage with museum collections. Object Lessons and Early Learning offers insights into strategies for engaging young children as learners in museum settings and in their everyday world, and, as such, will be essential reading for museum professionals, classroom educators, and students. It should also be of great interest to academics and researchers engaged in the study of museums and education.

How to Read a Diary Desirée Henderson 2019-06-25 How to Read a Diary is an expansive and accessible guidebook that introduces readers to the past, present, and future of diary writing. Grounded in examples from around the globe and from across history, this book explores the provocative questions diaries pose to readers: Are they private? Are they truthful? Why do some diarists employ codes? Do more women than men write diaries? How has the format changed in the digital age? In answering questions like these, *How to Read a Diary* offers a new critical vocabulary for interpreting diaries. Readers learn how to analyze diary manuscripts, identify the conventions of diary writing, examine the impact of technology on the genre, and appreciate the myriad personal and political motives that drive diary writing. Henderson also presents the diary's extensive influence upon literary history, ranging from masterpieces of world literature to young adult novels, graphic novels, and comics. *How to Read a Diary* invites readers to discover the rich and compelling stories that individuals tell about themselves within the pages of their diaries.

Archives of War Debra Ramsay 2023-07-21 This book offers a comparative analysis of British Army Unit War Diaries in the two World Wars, to reveal the role played by previously unnoticed technologies in shaping the archival records of war. Despite thriving scholarship on the history of war, the history of Operational Record Keeping in the British Army remains unexplored. Since World War I, the British Army has maintained daily records of its operations. These records, Unit War Diaries, are the first official draft of events on the battlefield. They are vital for the army's operational effectiveness and fundamental to the histories of British conflict, yet the material history of their own production and development has been widely ignored. This book is the first to consider Unit War Diaries as mediated, material artefacts with their own history. Through a unique comparative analysis of the Unit War Diaries of the First and Second World Wars, this book uncovers the mediated processes involved in the practice of operational reporting and reveals how hidden technologies and ideologies have shaped the official record of warfare. Tracking the records into The National Archives in Kew, where they are now held, the book interrogates how they are re-presented and re-interpreted through the archive. It investigates how the individuals, institutions and technologies involved in the production and uses of unit diaries from battlefield to archive have influenced how modern war is understood and, more importantly, waged. This book will be of much interest to students of media and communication studies, military history, archive studies and British history.

How to Write Technical Reports Lutz Hering 2010-10-14 Technical Reports are usually written according to general standards, corporate - sign standards of the current university or company, logical rules and practical - periences. These rules are not known well enough among engineers. There are many books that give general advice in writing. This book is specialised in how to write Technical Reports and addresses not only engineers, but also natural sci- th tists, computer scientists, etc. It is based on the 6 edition published in 2008 by st Vieweg in German and is now published as 1 edition by Springer in English. Both authors of the German edition have long experience in educating en- neers at the University of Applied Sciences Hannover. They have held many l- tures where students had to write reports and took notes about all positive and negative examples that occurred in design reports, lab work reports, and in theses. Prof. Dr. Lutz Hering has worked for VOLKSWAGEN and DAIMLER and then changed to the University of Applied Sciences Hannover where he worked from 1974 until 2000. He held lectures on Technical Drawing, Construction and Design, CAD and Materials Science. Dr. Heike Hering worked nine years as a Technical Writer and was responsible for many CAD manuals in German and English. She is now employed at TÜV NORD Akademie, where she is responsible for E-Learning projects, technical documentation and software training and supervises students who are writing their theses. Adapting to E-Books William Miller 2013-09-13 This book provides models for acquisitions policies and reports on several surveys of faculty and librarian attitudes toward e-books. It also discusses certain issues in acquiring cataloguing and collection development regarding this important new library resource. *ePro* Brian Tiplady 2016-05-13 Patient self-reported data has become increasingly important in today's clinical trials. Trials in some disease indications rely upon patient recorded diary data as the primary endpoint to demonstrate drug efficacy - including, for example, indications such as insomnia, migraine and pain. In addition, improvements in quality of life measured using patient questionnaires can now be included as claims on drug labelling. Traditionally these data have been collected using paper questionnaires and diaries issued to subjects. Regulators and the industry have become increasingly aware of the limitations of recording patient reported outcomes data on paper including data quality and integrity issues. As a result there is a growing interest in collection of patient reported outcomes data using electronic means (ePRO). Solutions include handheld PDAs, Interactive Voice Response (IVR) systems, and other site-based hardware such as touchscreen PCs. Recently, there has been much open debate with the regulators around the use of ePRO in clinical drug submissions. US and European agencies have approved new drugs that have included ePRO data in the submission dossier, but there are many questions around the adoption of the technology that concern the community. These include: ¶ How should instruments developed on paper be adapted for electronic use, and what degree of validation should be done between paper and electronic forms? ¶ How can researchers ensure they are complying with regulatory requirements including the PRO guidance published by FDA in 2009 when using ePRO solutions? ¶ Can fewer patients be exposed in a clinical trial as a result of improved data quality obtained using electronic diaries? ¶ What type of solution should be used for certain patient populations and protocols, and how can ePRO solutions be designed optimally to increase patient acceptability and compliance? Bill Byrom and Brian Tiplady's ePro addresses all these issues, reviews the new FDA guidance, and provides a very contemporary view on this important subject.

Writing and Unwriting (Media) Art History Joasia Krysa 2015-09-15 A critical mapping of the multiplicities of Finnish artist and technology pioneer Erkki Kurenniemi—composer of electronic music, experimental filmmaker, inventor, collector, futurologist. Over the past forty years, Finnish artist and technology pioneer Erkki Kurenniemi (b. 1941) has been a composer of electronic music, experimental filmmaker, computer animator, roboticist, inventor, and futurologist. Kurenniemi is a hybrid—a scientist-humanist-artist. Relatively unknown outside Nordic countries until his 2012 Documenta 13 exhibition, “In 2048,” Kurenniemi may at last be achieving international recognition. This book offers an excavation, a critical mapping, and an elaboration of Kurenniemi's multiplicities. The contributors describe Kurenniemi's enthusiastic, and rather obsessive, recording of everyday life and how this archiving was part of his process; his exploratory artistic practice, with productive failure an inherent part of his method; his relationship to scientific and technological developments in media culture; and his work in electronic and digital music, including his development of automated composition systems and his “video-organ,” DIMI-O. A

"Visual Archive," a section of interviews with the artist, and a selection of his original writings (translated and published for the first time) further document

Kurenniemi's achievements. But the book is not just about one artist in his time; it is about emerging media arts, interfaces, and archival fever in creative practices, read through the lens of Kurenniemi.
