Scars Like Wings Erin Stewart 2019-10-01 Relatable, heartbreaking, and real, this is a story of resilience—the perfect novel for readers of powerful contemporary fiction like *Girl in Pieces* and *Every Last Word*. Before, I was a million things. Now I'm only one. The Burned Girl. Ava Lee has lost everything there is to lose: Her parents. Her best friend. Her home. Even her face. She doesn't need a mirror to know what she looks like—she can see her reflection in the eyes of everyone around her. A year after the fire that destroyed her world, her aunt and uncle have decided she should go back to high school. Be "normal" again. Whatever that is. Ava knows better. There is no normal for someone like her. And forget making friends—no one wants to be seen with the Burned Girl, now or ever. But when Ava meets a fellow survivor named Piper, she begins to feel like maybe she doesn't have to face the nightmare alone. Sarcastic and blunt, Piper isn't afraid to push Ava out of her comfort zone. Piper introduces Ava to Asad, a boy who loves theater just as much as she does, and slowly, Ava tries to create a life again. Yet Piper is fighting her own battle, and soon Ava must decide if she's going to fade back into her scars . . . or let the people by her side help her fly. "A heartfelt and unflinching look at the reality of being a burn survivor and at the scars we all carry. This book is for everyone, burned or not, who has ever searched for a light in the darkness." --Stephanie Nielson, New York Times bestselling author of *Heaven Is Here* and a burn survivor

Big Bang Simon Singh 2005-01-04 We've all heard of the Big Bang, and yet few of us truly know what it is. Renowned for making difficult ideas much less difficult than they might first appear, Simon Singh is our perfect guide to explaining why cosmologists believe that the Big Bang is an accurate description of the origin and evolution of the universe. This highly readable and entertaining book tells the story of the many brilliant, often eccentric scientists who fought against the establishment idea of an eternal and unchanging cosmos. From such early Greek cosmologists as Anaximander to recent satellite measurements taken deep in space, Big Bang is a narrative full of anecdotes and personal histories. With characteristic clarity, Simon Singh tells the centuries-long story of mankind's attempt to understand how the universe came to be, a story which itself begins some 14 billion years ago (give or take a billion years). Simon Singh shows us that it is within the capability of all of us -- in his expert hands - to understand the Big Bang: the fundamental theory in all of science, and a high point -- perhaps the high point -- of human achievement.

Soon the ugly sweaters her aunt has made for her all disappear within the black hole, as does the smelly class hamster she's taking care of, and most important, all the reminders of her dead father that are just too painful to have around. It's not until Stella, her younger brother, Cosmo, the family puppy, and even the bathroom tub all get swallowed up by the black hole that Stella comes to realize she has been letting her own grief consume her. And that's not the only thing she realizes as she attempts to get back home. This is an astonishingly original and funny adventure with a great big heart.

But when Tal finds a shoebox full of old letters from Julian Oliver—yes, the indie rock star Julian Oliver—she begins to piece the story together. She writes to Julian, but after three years of radio silence, she's given up hope. Then one day, completely out of the blue, Julian shows up at her doorstep, and Tal doesn't know whether to be furious or to throw herself into his arms. Before she can decide, he asks her to go on a trip with him to meet her long-stranded family and to say good-bye to his father, her grandfather, who is dying. Getting to know your father after sixteen years of estrangement doesn't happen in one car ride. But as Tal spends more time with Julian and his family, she begins to untangle her parents' secret past, and discovers a part of herself she never recognized before. The Little Book of Black Holes Steven S. Gubser 2017-09-25 Dive into a mind-bending exploration of the physics of black holes Black holes, predicted by Albert Einstein's general theory of relativity more than a century ago, have long intrigued scientists and the public with their bizarre and fantastical properties. Although Einstein understood that black holes were mathematical solutions to his equations, he never accepted their physical reality—a viewpoint many shared. This all changed in the 1960s and 1970s, when a deeper conceptual understanding of black holes developed just as new observations revealed the existence of quasars and X-ray binary star systems, whose mysterious properties could be explained by the presence of black holes. Black holes have since been the subject of intense research—and the physics governing how they behave and affect their surroundings is stranger and more mind-bending than any fiction. After introducing the basics of the special and general theories of relativity, this book describes black holes both as astrophysical objects and theoretical “laboratories” in which physicists can test their understanding of gravitational, quantum, and thermal physics. From Schwarzschild black holes to rotating and colliding black holes, and from gravitational radiation to Hawking radiation and information loss, Steven Gubser and Frans Pretorius use creative thought experiments and analogies to explain their subject accessibly. They also describe the decades-long quest to observe the universe in gravitational waves, which recently resulted in the LIGO observatories' detection of the distinctive gravitational wave “chirp” of two colliding black holes—the first direct observation of black holes' existence. The Little Book of Black Holes takes readers deep into the mysterious heart of the subject, offering rare clarity of insight into the physics that makes black holes simple yet destructive manifestations of geometric destiny.

In this book, she helps us to understand and find delight in the black hole—perhaps the most opaque theoretical construct ever imagined by physicists—illustrated with original artwork by American painter and photographer Lia Halloran. Levin takes us on an evocative exploration of black holes, provoking us to imagine the visceral experience of a black hole encounter. The Road Cormac McCarthy 2007-03-20 WINNER OF THE PULITZER PRIZE • NATIONAL BESTSELLER • A searing, post-apocalyptic novel about a father and son's fight to survive, this "tale of survival and the miracle of goodness only adds to McCarthy's stature as a living master. It's gripping, frightening and, ultimately, beautiful" (San Francisco Chronicle). • From the bestselling author of *The Passenger* A father and his son walk alone through burned America. Nothing moves in the ravaged landscape save the ash on the wind. It is cold enough to crack stones, and when the snow falls it is gray. The sky is dark. Their destination is the coast, although they don't know what, if anything, awaits them there. They have nothing; just a pistol to defend themselves against the lawless bands that stalk the road, the clothes they are wearing, a cart of scavenged food—and each other. *The Road* is the profoundly moving story of a journey. It boldly imagines a future in which no hope remains, but in which the father and his son, "each the other's world entire," are sustained by love. Awesome in the totality of its vision, it is an unflinching meditation on the worst and the best that we are capable of: ultimate destructiveness, desperate tenacity, and the tenderness that keeps two people alive in the face of total devastation. Look for Cormac McCarthy's latest bestselling novels, *The Passenger* and *Stella Maris*.

Black Hole Blues and Other Songs from Outer Space Janna Levin 2016-03-29 The authoritative story of the headline-making discovery of gravitational waves—by an eminent theoretical astrophysicist and award-winning writer. From the author of *How the Universe Got Its Spots* and *A Madman Dreams of Turing Machines*, the epic story of the scientific campaign to record the soundtrack of our universe. Black holes are dark. That is their essence. When black holes collide, they will do so unilluminated. Yet the black hole collision is an event more powerful than any since the origin of the universe. The profusion of energy will emanate as waves in the shape of spacetime: gravitational waves. No telescope will ever record the event; instead, the only evidence would be the sound of spacetime ringing. In 1916, Einstein predicted the existence of gravitational waves, his top priority after he proposed his theory of curved

spacetime. One century later, we are recording the first sounds from space, the soundtrack to accompany astronomy's silent movie. In *Black Hole Blues* and *Other Songs from Outer Space*, Janna Levin recounts the fascinating story of the obsessions, the aspirations, and the trials of the scientists who embarked on an arduous, fifty-year endeavor to capture these elusive waves. An experimental ambition that began as an amusing thought experiment, a mad idea, became the object of fixation for the original architects—Rai Weiss, Kip Thorne, and Ron Drever. Striving to make the ambition a reality, the original three gradually accumulated an international team of hundreds. As this book was written, two massive instruments of remarkably delicate sensitivity were brought to advanced capability. As the book draws to a close, five decades after the experimental ambition began, the team races to intercept a wisp of a sound with two colossal machines, hoping to succeed in time for the centenary of Einstein's most radical idea. Janna Levin's absorbing account of the surprises, disappointments, achievements, and risks in this unfolding story offers a portrait of modern science that is unlike anything we've seen before.

The Sun Is Also a Star Nicola Yoon 2016-11-01 The #1 New York Times bestseller and National Book Award Finalist from the bestselling author of *Everything, Everything* will have you falling in love with Natasha and Daniel as they fall in love with each other. Natasha: I'm a girl who believes in science and facts. Not fate. Not destiny. Or dreams that will never come true. I'm definitely not the kind of girl who meets a cute boy on a crowded New York City street and falls in love with him. Not when my family is twelve hours away from being deported to Jamaica. Falling in love with him won't be my story. Daniel: I've always been the good son, the good student, living up to my parents' high expectations. Never the poet. Or the dreamer. But when I see her, I forget about all that. Something about Natasha makes me think that fate has something much more extraordinary in store—for both of us. The Universe: Every moment in our lives has brought us to this single moment. A million futures lie before us. Which one will come true? *** "Beautifully crafted."--People Magazine "A book that is very much about the many factors that affect falling in love, as much as it is about the very act itself . . . fans of Yoon's first novel, *Everything Everything*, will find much to love—if not, more—in what is easily an even stronger follow up." —Entertainment Weekly "Transcends the limits of YA as a human story about falling in love and seeking out our futures." —POPSUGAR.com
