Self-Similar Processes in Telecommunications Oleg Sheluhin 2007-03-13 For the first time the problems of voice services self-similarity are discussed systematically and in detail with specific examples and illustrations. Self-Similar Processes in Telecommunications considers the self-similar (fractal and multifractal) models of telecommunication traffic and efficiency based on the assumption that its traffic has fractal or multifractal properties (is self-similar). The theoretical aspects of the most well-known traffic models demonstrating self-similar properties are discussed in detail and the comparative analysis of the different models' efficiency for self-similar traffic is presented. This book demonstrates how to use self-similar processes for designing new telecommunications systems and optimizing existing networks so as to achieve maximum efficiency and serviceability. The approach is rooted in theory, describing the algorithms (the logical arithmetical or computational procedures that define how a task is performed) for modeling these self-similar processes. However, the language and ideas are essentially accessible for those who have a general knowledge of the subject area and the advice is highly practical: all models, problems and solutions are illustrated throughout using numerous real-world examples. Adopts a detailed, theoretical, yet broad-based and practical mathematical approach for designing and operating numerous types of telecommunications systems and networks so as to achieve maximum efficiency Places the subject in context, describing the current algorithms that make up the fractal or self-similar processes while pointing to the future development of the technology Offers a comparative analysis of the different types of self-similar process usage within the context of local area networks, wide area networks and in the modeling of video traffic and mobile communications networks Describes how mathematical models are used as a basis for building numerous types of network, including voice, audio, data, video, multimedia services and IP (Internet Protocol) telephony The book will appeal to the wide range

of specialists dealing with the design and exploitation of telecommunication systems. It will be useful for the post-graduate students, lecturers and researchers connected with communication networks disciplines.

Climate Law and Developing Countries Benjamin J. Richardson 2010 'The phenomenon of anthropogenic climate change has become of critical importance to all countries. However, while the majority of developing countries contribute the least to global greenhouse gas emissions, they will generally bear the major burden of the social, environmental and economic impacts of climate change imposed upon them by developed countries. This cutting-edge book contains outstanding contributions by scholars from around the world on the need to expand the range of legal and policy mechanisms and strategies required to bridge the gaps between the north and the south to achieve global climate justice.' - Ben Boer, University of Sydney and former Co-director of the IUCN Academy of Environmental Law This timely book examines the legal and policy challenges in international, regional and national settings, faced by developing countries in mitigating and adapting to climate change. With contributions from over twenty international scholars from developing and developed countries, the book tackles both long-standing concerns and current controversies. It considers the positions of developing countries in the negotiation of a new international legal regime to replace the Kyoto Protocol and canvasses various domestic issues, including implementation of CDM projects, governance of adaptation measures and regulation of the biofuels industry. Through a unique focus on the developing world, this book makes a significant contribution to understanding current challenges and future directions of climate law.

Ensuring Quality Cancer Care Institute of Medicine and National Research Council 1999-07-21

We all want to believe that when people get cancer, they will receive medical care of the highest quality. Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? Ensuring Quality Cancer Care provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality care and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A status report on health services research is included. Ensuring Quality Cancer Care offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer.

Embodying Inequality Nancy Krieger 2016-12-05 To advance the epidemiological analysis of social inequalities in health, and of the ways in which population distributions of disease,

disability, and death reflect embodied expressions of social inequality, this volume draws on articles published in the "International Journal of Health Services" between 1990 and 2000. Framed by ecosocial theory, it employs ecosocial constructs of "embodiment"; "pathways of embodiment"; "cumulative interplay of exposure, susceptibility, and resistance across the lifecourse"; and "accountability and agency" to address the question; and who and what drives current and changing patterns of social inequalities in health.
