Strategy Without Design Robert C. H. Chia 2009-10-08 A unique analysis of strategy in organizations that shows how successful strategies may result without planning or design.

Howard Hughes: The Secret Life Charles Higham 2013-09-24 His wealth was legendary. His passions were bizarre. Now, the truth about the money, the madness, and the man behind the enigma. Howard Hughes is one of the best known and least understood men of our times--famed for his wealth, his daring, and his descent into madness. Bestselling biographer Charles Higham goes beyond the enigma to reveal the incredible private life of Howard Hughes: * his romances with the great stars of Hollywood--Katharine Hepburn, Bette Davis, Cary Grant, Tyrone Power, and numerous others * his forays into sadomasochism * his involvement with Richard Nixon and Watergate * his bizarre final years This is a compelling portrait of a unique American figure--in a story as revealing as it is unforgettable.

Signatures of the Visible Frederic Jameson 2016-01-29 In such celebrated works as Postmodernism: The Cultural Logic of Late Capitalism, Fredric Jameson has established himself as one of America's most observant cultural commentators. In Signatures of the Visible, Jameson turns his attention to cinema - the artform that has replaced the novel as the defining cultural form of our time. Histori

Environmental Groups and Legal Expertise Carolyn Abbot 2021-03-04 Environmental Groups and Legal Expertise explores the use and understanding of law and legal expertise by environmental groups. Rather than the usual focus on the court room, it scrutinises environmental NGO advocacy during the extraordinarily dramatic Brexit process, from the referendum on leaving the EU in June 2016 to the debate around the new Environment Bill in the first half of 2020. There is generally a weak understanding of both the complexity and the potential of legal expertise in the environmental NGO community. Legal expertise can be more than a tool for campaigners, and more than litigation: it provides distinctive ways of both seeing the world and changing the world. The available legal resource in the sector is not just a practical limit on what can be done, but spills into the very understanding of what should be done, and what resource is needed. Mutually reinforcing links between

capacity, understanding, culture and investment affect legal expertise across the board. There are, however, pockets of sophisticated legal expertise in the community, and legal expertise was heavily and often effectively used in the anomalously law-heavy Brexit-environment debate. The ability to call on thinly spread legal expertise in a crisis was in part due to effective NGO collaboration around Brexit-environment. **Drawing Futures** Laura Allen 2016 This compendium of projects, writings and interviews focuses on how the field of drawing expands synchronously alongside technological and computational developments. This book critically reassess the act of drawing and where its future may lie. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas. Drawings seduce, and the drawings in this book are tantalising evidence of this. Yet the aim of the book is to illustrate how drawing works as an abundantly rich, diverse, inventive, critical and serious research domain. In this regard, it is a study of the point and promise of drawing; which both explores the microscopic detail of the craft and envisions the radical possibilities inherent in its expression. The academics, artists and architects whose work lies within conceive of drawing as a rigorous, liberating form of expression.

Together Richard Sennett 2012-01-10 Discusses why people tend to avoid social engagement with those unlike themselves, why increased cooperation is necessary to make society prosper, and the skills necessary for strengthening cooperation.

For Her Own Good Barbara Ehrenreich 2013-10-02 This women's history classic brilliantly exposed the constraints imposed on women in the name of science and exposes the myths used to control them. Since the the nineteenth century, professionals have been invoking scientific expertise to prescribe what women should do for their own good. Among the experts' diagnoses and remedies: menstruation was an illness requiring seclusion; pregnancy, a disabling condition; and higher education, a threat to long-term health of the uterus. From clitoridectomies to tame women's behavior in the nineteenth century to the censure of a generation of mothers as castrators in the 1950s, doctors have not hesitated to intervene in women's sexual, emotional, and maternal lives. Even domesticity, the most popular prescription for a safe

environment for woman, spawned legions of “scientific” experts. Barbara Ehrenreich and Dierdre English has never lost faith in science itself, but insist that we hold those who interpret it to higher standards. Women are entering the medical and scientific professions in greater numbers but as recent research shows, experts continue to use pseudoscience to tell women how to live. For Her Own Good provides today’s readers with an indispensable dose of informed skepticism.

[Traditional Craftsmanship as Intangible Cultural Heritage and an Economic Factor in Austria](#) Roman Sandgruber 2019

Life to Those Shadows Noël Burch 1990-11-21 Noel Burch’s new book is a critique of the assumptions underlying ‘classical’ approaches to film history: the assumption that what we call the language of film was a natural, organic development, that it lay latent from the outset in the basic technology of the camera, waiting for the prescient pioneers to bring it into being; and the assumption that this language was a universal, neutral medium, innocent of any social or historical meaning in itself." "His major thesis is that, on the contrary, film language has a social and economic history, that it evolved in the way it did because of when and where it was constructed -- in the capitalist and imperialist west between 1892 and 1929." "The book examines the chronology of the emergence of what it defines as cinema's Institutional Mode of Representation and the socio-historical circumstances in which this took place. It examines the principles of visualisation -- camera placement and movement, lighting, editing, mise-en-scene -- that film-makers and audiences came to internalize over the first three decades. Special emphasis is laid on the allimportant change that occurred in the imaginary placing of the spectator, from a position of exteriority to the film image, implicit in both film-form and viewing conditions during the primitive era (pre-1909), to the imaginary centering of the spectator-subject, completed only with the generalisation of lip-synch sound after 1929. It is the contention of this book that this imaginary centering of a sensorily isolated spectator is the keystone of the cinematic illusion of reality, still achieved today by the same means as it was sixty years ago.

Sonic Interaction Design Karmen Franinovic 2013-03-22 An overview of emerging topics, theories, methods, and practices in sonic interactive design, with a focus on the multisensory aspects of sonic experience. Sound is an integral part of every user experience but a neglected medium in design disciplines. Design of an artifact's sonic qualities is often limited to the shaping of functional, representational, and signaling roles of sound. The interdisciplinary field of sonic interaction design (SID) challenges these prevalent approaches by considering sound as an active medium that can enable novel sensory and social experiences through interactive technologies. This book offers an overview of the emerging SID research, discussing theories, methods, and practices, with a focus on the multisensory aspects of sonic experience. Sonic Interaction Design gathers contributions from scholars, artists, and designers working at the intersections of fields ranging from electronic music to cognitive science. They offer both theoretical considerations of key themes and case studies of products and systems created for such contexts as mobile music, sensorimotor learning, rehabilitation, and gaming. The goal is not only to extend the existing research and pedagogical approaches to SID but also to foster domains of practice for sound designers, architects, interaction designers, media artists, product designers, and urban planners. Taken together, the chapters provide a foundation for a still-emerging field, affording a new generation of designers a fresh perspective on interactive sound as a situated and multisensory experience. The Conscience of the Eye: The Design and Social Life of Cities Richard Sennett 1992-08-17 "Visionary, often brilliant." —Los Angeles Times From the assembly halls of Athens to the Turkish baths of New York's Lower East Side, from eighteenth-century English gardens to the housing projects of Harlem—a study of the physical fabric of the city as a mirror of Western society and culture.

City Douglas W. Rae 2008-10-01 How did neighborhood groceries, parish halls, factories, and even saloons contribute more to urban vitality than did the fiscal might of postwar urban renewal? With a novelist’s eye for telling detail, Douglas Rae depicts the features that contributed most to city life in the early “urbanist” decades of the twentieth century. Rae’s subject is New Haven, Connecticut, but the lessons he draws apply to many American cities. *City: Urbanism and Its End* begins with a richly textured portrait of New Haven in the early twentieth century, a period of centralized manufacturing, civic vitality, and mixed-use neighborhoods. As social and economic conditions changed, the city confronted its end of urbanism first during the Depression, and then very aggressively during the mayoral reign of Richard C. Lee (1954–70), when New Haven led the nation in urban renewal spending. But government spending has repeatedly failed to restore urban vitality. Rae argues that strategies for the urban future should focus on nurturing the unplanned civic engagements that make mixed-use city life so appealing and so civilized. Cities need not reach their old peaks of population, or look like thriving suburbs, to be once again splendid places for human beings to live and work.

A Short History of Film, Third Edition Wheeler Winston Dixon 2018-03-30 With more than 250 images, new information on international cinema—especially Polish, Chinese, Russian, Canadian, and Iranian filmmakers—an expanded section on African-American filmmakers, updated discussions of new works by major American directors, and a new section on the rise of comic book movies and computer generated special effects, this is the most up to date resource for film history courses in the twenty-first century.

[The Craftsman](#) Richard Sennett 2009-02-05 Why do people work hard, and take pride in what they do? This book, a philosophically-minded enquiry into practical activity of many different kinds past and present, is about what happens when people try to do a good job. It asks us to think about the true meaning of skill in the 'skills society' and argues that pure competition is a poor way to achieve quality work. Sennett suggests, instead, that there is a craftsman in every human being, which can sometimes be enormously motivating and inspiring - and can also in other circumstances make individuals obsessive and frustrated. The Craftsman shows how history has drawn fault-lines between craftsman and artist, maker and user, technique and expression, practice and theory, and that individuals' pride in their work, as well as modern society in general, suffers from these historical divisions. But the past lives of crafts and craftsmen show us ways of working (using tools, acquiring skills, thinking about materials) which provide rewarding alternative ways for people to utilise their talents. We need to recognise this if motivations are to be understood and lives made as fulfilling as possible.

[Understanding Media](#) Marshall McLuhan 2016-09-04 When first published, Marshall McLuhan's *Understanding Media* made history with its radical view of the effects of electronic communications upon man and life in the twentieth century.

[Mapping Intermediality in Performance](#) Sarah Bay-Cheng 2010 This insightful book explores the relationship between theater and digital culture. The authors show that the marriage of traditional performance with new technologies leads to an upheaval of the implicit “live” quality of theatre by introducing media interfaces and Internet protocols, all the while blurring the barriers between theater-makers and their audience.

Architecture and Narrative Sophia Psarra 2009-01-06 Architecture is often seen as the art of a thinking mind that arranges, organizes and establishes relationships between the parts and the whole. It is also seen as the art of designing spaces, which we experience through movement and use. Conceptual ordering, spatial and social narrative are fundamental to the ways in which buildings are shaped, used and perceived. Examining and exploring the ways in which these three dimensions interact in the design and life of buildings, this intriguing book will be of use to anyone with an interest in the theory of architecture and architecture's relationship to the cultural human environment.

The Early Colombian Labor Movement David Sowell 1992 In this book, David Sowell traces the history of artisan labor organizations in

Bogota and examines long-term political activity of Colombian artisans in the century after independence. Relying on contemporary newspapers, political handouts, broadsides, and public petitions, Sowell describes and analyzes the economic, social, and political history of the capital's artisan class, a middling social sector with very significant social and political strengths. Latin American labor history has heretofore focused almost exclusively on twentieth-century industrial or agrarian laborers. This is the first study in English of nineteenth-century Latin American artisans and one of the few treatments that spans the whole of nineteenth-century Colombian history. The rise and subsequent decline of artisan class political activity coincided with Colombia's integration into the world market. Initially petitioning for tariff protection, Bogota's craftsmen in time mobilized to address numerous issues, including industrial education, internal trade order, credit, and better health and educational facilities. The artisan class was a sizeable share of the urban electorate and, at the beginning of this period, was essentially cohesive. Sowell traces the transformation of Colombia's economy and the (mainly negative) effects its evolution had on bogotano artisans. By the end of the nineteenth century, the fragmentation of the artisan class had destroyed their broad mobilizations. No longer leaders of the Colombian labor movement, the artisans were replaced by laborers associated with industrial production, transportation systems, and the production of coffee. The study of artisan-based labor activity illuminates the foundations of contemporary Latin American societies. Sowell's examination of the political expression of artisan class interests and the social and political variables that affected those interests sheds light on the subsequent industrial development in Colombia as well as on the "modern" period of Latin American history. *Digital Material* Marianne van den Boomen 2009 This is a compelling study of the often controversial role and meaning of the new media and digital cultures in contemporary society. Three decades of societal and cultural alignment of new media yielded to a host of innovations, trials, and problems, accompanied by versatile popular and academic discourse. "New Media Studies" crystallized internationally into an established academic discipline, which begs the question: where do we stand now; which new issues have emerged now that new media are taken for granted, and which riddles remain unsolved; and, is contemporary digital culture indeed all about 'you', or do we still not really understand the digital machinery and how it constitutes us as 'you'. From desktop metaphors to Web 2.0 ecosystems, from touch screens to blogging to e-learning, from role-playing games to Cybergoth music to wireless dreams, this timely volume offers a showcase of the most up-to-date research in the field from what may be called a 'digital-materialist' perspective.

Digital Roots Gabriele Balbi 2021-09-07 As media environments and communication practices evolve over time, so do theoretical concepts. This book analyzes some of the most well-known and fiercely discussed concepts of the digital age from a historical perspective, showing how many of them have pre-digital roots and how they have changed and still are constantly changing in the digital era. Written by leading authors in media and communication studies, the chapters historicize 16 concepts that have become central in the digital media literature, focusing on three main areas. The first part, Technologies and Connections, historicises concepts like network, media convergence, multimedia, interactivity and artificial intelligence. The second one is related to Agency and Politics and explores global governance, datafication, fake news, echo chambers, digital media activism. The last one, Users and Practices, is finally devoted to telepresence, digital loneliness, amateurism, user generated content, fandom and authenticity. The book aims to shed light on how concepts emerge and are co-shaped, circulated, used and reappropriated in different contexts. It argues for the need for a conceptual media and communication history that will reveal new developments without concealing continuities and it demonstrates how the analogue/digital dichotomy is often a misleading one. **The Future of Work** R. Donkin 2009-11-06 The forces that are shaping the future of employment are examined in this new book. The author presents a cohesive argument for a fundamental change in attitudes to work, both from policymakers and employers if we are to create a healthier society capable of meeting the expectations and concerns of a developing economy.

The Uses of Disorder Richard Sennett 2021-11-16 Reissue of the classic text on how cities should be planned When first published in 1970, *The Uses of Disorder* was a call to arms against the deadening hand of modernist urban planning upon the thriving chaotic city. Written in the aftermath of the 1968 student uprising in the US and Europe, it demands a reimagination of the city and how class, city life and identity combine. Too often, this leads to divisions, such as the middle class flight to the suburbs, leaving the inner cities in desperate straits. In response, Sennett offers an alternative image of a "dense, disorderly, overwhelming cities" that allow for change and the development of community. Fifty years later this book is as essential as it was when it first came out, and remains an inspiration to architects, planners and urban thinkers everywhere.

Traumatic Affect Meera Atkinson 2013-08-19 Traumatic Affect examines the intersection of trauma theory and affect theory, two areas of crucial relevance to contemporary thought. While both fields continue to offer insights into individual and collective experience, exploring their nexus offers timely and necessary critiques of film, literature, art, culture and politics. This collection of essays by established and emerging thinkers considers the dynamic relations within and between affect and trauma. Varied in style and approach, this volume asks how the relational subject conceived by affect theory might bring into question certain presuppositions common to trauma theory and how the ethical imperatives of trauma might require a rethinking of aspects of affect theory. Thus the contributors reimagine the unrepresentability of trauma, reveal its affective economies, and chart innovative understandings of experiences, embodiments, and events. From the silence into which Walter Benjamin fell after the suicide of his closest friend to the trauma of becoming the emblematic media figure of the London bombings, Traumatic Affect traverses diverse terrain: gesture and the everyday, cinema and torture, art and writing, civility and specters, media representation and Indigenous Australian film. Featuring essays by Shoshana Felman, Karyn Ball, Jennifer L. Biddle, Anna Gibbs, Ben O'Loughlin, Anne Rutherford, Magdalena Zolkos, Aaron Kerner, Ricardo Mbarkho, Jonathan L. Knapp, Michael Richardson and Meera Atkinson, Traumatic Affect ventures into bold new territories at the juncture between trauma and affect, illuminating pressing realities that demand engagement.

Bullshit Jobs David Graeber 2019-05-07 From bestselling writer David Graeber—“a master of opening up thought and stimulating debate” (Slate)—a powerful argument against the rise of meaningless, unfulfilling jobs...and their consequences. Does your job make a meaningful contribution to the world? In the spring of 2013, David Graeber asked this question in a playful, provocative essay titled “On the Phenomenon of Bullshit Jobs.” It went viral. After one million online views in seventeen different languages, people all over the world are still debating the answer. There are hordes of people—HR consultants, communication coordinators, telemarketing researchers, corporate lawyers—whose jobs are useless, and, tragically, they know it. These people are caught in bullshit jobs. Graeber explores one of society’s most vexing and deeply felt concerns, indicting among other villains a particular strain of finance capitalism that betrays ideals shared by thinkers ranging from Keynes to Lincoln. “Clever and charismatic” (The New Yorker), Bullshit Jobs gives individuals, corporations, and societies permission to undergo a shift in values, placing creative and caring work at the center of our culture. This book is for everyone who wants to turn their vocation back into an avocation and “a thought-provoking examination of our working lives” (Financial Times).

[Governing Gaza](#) Ilana Feldman 2008-07-01 Marred by political tumult and violent conflict since the early twentieth century, Gaza has been subject to a multiplicity of rulers. Still not part of a sovereign state, it would seem too exceptional to be a revealing site for a study of government. Ilana Feldman proves otherwise. She demonstrates that a focus on the Gaza Strip uncovers a great deal about how government actually works, not only in that small geographical space but more generally. Gaza’s experience shows how important bureaucracy is for the survival of government. Feldman analyzes civil service in Gaza under the British Mandate (1917–48) and the Egyptian Administration (1948–67). In the process, she sheds light on how governing authority is produced and reproduced; how government persists, even under conditions that seem untenable; and how government affects and is affected by the people and places it governs. Drawing on archival research in Gaza, Cairo, Jerusalem, and London, as well as two years of ethnographic research with retired civil servants in Gaza, Feldman identifies two distinct, and in some ways contradictory, governing practices. She illuminates mechanisms of “reiterative authority” derived from the minutiae of daily bureaucratic practice, such as the repetitions of filing procedures, the accumulation of documents, and the habits of

civil servants. Looking at the provision of services, she highlights the practice of “tactical government,” a deliberately restricted mode of rule that makes limited claims about governmental capacity, shifting in response to crisis and operating without long-term planning. This practice made it possible for government to proceed without claiming legitimacy: by holding the question of legitimacy in abeyance. Feldman shows that Gaza’s governments were able to manage under, though not to control, the difficult conditions in Gaza by deploying both the regularity of everyday bureaucracy and the exceptionality of tactical practice.

Robot Ethics 2.0 Patrick Lin 2017 The robot population is rising on Earth and other planets. (Mars is inhabited entirely by robots.) As robots slip into more domains of human life—from the operating room to the bedroom—they take on our morally important tasks and decisions, as well as create new risks from psychological to physical. This makes it all the more urgent to study their ethical, legal, and policy impacts. To help the robotics industry and broader society, we need to not only press ahead on a wide range of issues, but also identify new ones emerging as quickly as the field is evolving. For instance, where military robots had received much attention in the past (and are still controversial today), this volume looks toward autonomous cars here as an important case study that cuts across diverse issues, from liability to psychology to trust and more. And because robotics feeds into and is fed by AI, the Internet of Things, and other cognate fields, robot ethics must also reach into those domains, too. Expanding these discussions also means listening to new voices; robot ethics is no longer the concern of a handful of scholars. Experts from different academic disciplines and geographical areas are now playing vital roles in shaping ethical, legal, and policy discussions worldwide. So, for a more complete study, the editors of this volume look beyond the usual suspects for the latest thinking. Many of the views as represented in this cutting-edge volume are provocative—but also what we need to push forward in unfamiliar territory.

Beautiful Users Ellen Lupton 2014-11-18 In the mid-twentieth century, Henry Dreyfuss—widely considered the father of industrial design—pioneered a user-centered approach to design that focuses on studying people’s behaviors and attitudes as a key first step in developing successful products. In the intervening years, user-centered design has expanded to undertake the needs of differently abled users and global populations as well as the design of complex systems and services. Beautiful Users explores the changing relationship between designers and users and considers a range of design methodologies and practices, from user research to hacking, open source, and the maker culture.

Mastery Robert Greene 2013-10-29 From the bestselling author of *The 48 Laws of Power* and *The Laws of Human Nature*, a vital work revealing that the secret to mastery is already within you. Each one of us has within us the potential to be a Master. Learn the secrets of the field you have chosen, submit to a rigorous apprenticeship, absorb the hidden knowledge possessed by those with years of experience, surge past competitors to surpass them in brilliance, and explode established patterns from within. Study the behaviors of Albert Einstein, Charles Darwin, Leonardo da Vinci and the nine contemporary Masters interviewed for this book. The bestseller author of *The 48 Laws of Power*, *The Art of Seduction*, and *The 33 Strategies of War*, Robert Greene has spent a lifetime studying the laws of power. Now, he shares the secret path to greatness. With this seminal text as a guide, readers will learn how to unlock the passion within and become masters.

Apollo’s Angels Jennifer Homans 2010-11-02 NATIONAL BESTSELLER For more than four hundred years, the art of ballet has stood at the center of Western civilization. Its traditions serve as a record of our past. Lavishly illustrated and beautifully told, *Apollo’s Angels*—the first cultural history of ballet ever written—is a groundbreaking work. From ballet’s origins in the Renaissance and the codification of its basic steps and positions under France’s Louis XIV (himself an avid dancer), the art form wound its way through the courts of Europe, from Paris and Milan to Vienna and St. Petersburg. In the twentieth century, émigré dancers taught their art to a generation in the United States and in Western Europe, setting off a new and radical transformation of dance. Jennifer Homans, a historian, critic, and former professional ballerina, wields a knowledge of dance born of dedicated practice. Her admiration and love for the ballet, as *Entertainment Weekly* notes, brings “a dancer’s grace and sure-footed agility to the page.” NAMED ONE OF THE BEST BOOKS OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW • LOS ANGELES TIMES • SAN FRANCISCO CHRONICLE • PUBLISHERS WEEKLY

Cooking for Geeks Jeff Potter 2010-07-20 Presents recipes ranging in difficulty with the science and technology-minded cook in mind, providing the science behind cooking, the physiology of taste, and the techniques of molecular gastronomy.

Critical Architecture Jane Rendell 2007-09-12 *Critical Architecture* examines the relationship between critical practice in architecture and architectural criticism. Placing architecture in an interdisciplinary context, the book explores architectural criticism with reference to modes of criticism in other disciplines - specifically art criticism - and considers how critical practice in architecture operates through a number of different modes: buildings, drawings and texts. With forty essays by an international cast of leading architectural academics, this accessible single source text on the topical subject of architectural criticism is ideal for undergraduate as well as post graduate study.

Making Futures Pelle Ehn 2014-10-31 This book describes experiments in innovation, design, and democracy, undertaken largely by grassroots organizations, non-governmental organizations, and multi-ethnic working-class neighborhoods. These stories challenge the dominant perception of what constitutes successful innovations. They recount efforts at social innovation, opening the production process, challenging the creative class, and expanding the public sphere. The cases considered include a collective of immigrant women who perform

collaborative services, the development of an open-hardware movement, grassroots journalism, and hip-hop performances on city buses. They point to the possibility of democratized innovation that goes beyond solo entrepreneurship and crowdsourcing in the service of corporations to include multiple futures imagined and made locally by often-marginalized publics.

The Virtual Window Anne Friedberg 2009-02-13 From the Renaissance idea of the painting as an open window to the nested windows and multiple images on today’s cinema, television, and computer screens: a cultural history of the metaphoric, literal, and virtual window. As we spend more and more of our time staring at the screens of movies, televisions, computers, and handheld devices—“windows” full of moving images, texts, and icons—how the world is framed has become as important as what is in the frame. In *The Virtual Window*, Anne Friedberg examines the window as metaphor, as architectural component, and as an opening to the dematerialized reality we see on the screen. In *De pictura* (1435), Leon Battista Alberti famously instructed painters to consider the frame of the painting as an open window. Taking Alberti’s metaphor as her starting point, Friedberg tracks shifts in the perspectival paradigm as she gives us histories of the architectural window, developments in glass and transparency, and the emerging apparatuses of photography, cinema, television, and digital imaging. Single-point perspective—Alberti’s metaphorical window—has long been challenged by modern painting, modern architecture, and moving-image technologies. And yet, notes Friedberg, for most of the twentieth century the dominant form of the moving image was a single image in a single frame. The fractured modernism exemplified by cubist painting, for example, remained largely confined to experimental, avant-garde work. On the computer screen, however, where multiple ‘windows’ coexist and overlap, perspective may have met its end. In this wide-ranging book, Friedberg considers such topics as the framed view of the camera obscura, Le Corbusier’s mandates for the architectural window, Eisenstein’s opinions on the shape of the movie screen, and the multiple images and nested windows commonly displayed on screens today. *The Virtual Window* proposes a new logic of visuality, framed and virtual: an architecture not only of space but of time.

Disaster Policy and Politics Richard T. Sylvès 2019-02-13 *Disaster Policy and Politics* combines evidence-based research with mini-case studies of recent events to demonstrate the fundamental principles of emergency management and to explore the impact that disasters have had on U.S. policy. Paying special attention to the role of key actors—decision makers at the federal, state, and local levels; scientists; engineers; civil and military personnel; and first responders—author Richard Sylvès explores how researchers contribute to and engage in disaster policy development and management. The highly anticipated Third Edition explores the radical change in policy and politics after the occurrence of recent disasters such as hurricanes Irma, Maria, and Harvey; Hawaii’s false nuclear attack warning; and responses to U.S. wildfires. The book’s comprehensive “all-hazards” approach introduces students to the important public policy, organizational management, and leadership issues they may need as future practitioners and leaders in the field.

Radical Help Hilary Cottam 2018-06-07 How should we live: how should we care for one another; grow our capabilities to work, to learn, to love and fully realise our potential? This exciting and ambitious book shows how we can re-design the welfare state for this century. The welfare state was revolutionary: it lifted thousands out of poverty, provided decent homes, good education and security. But it is out of kilter now: an elaborate and expensive system of managing needs and risks. Today we face new challenges. Our resources have changed. Hilary Cottam takes us through five ‘Experiments’ to show us a new design. We start on a Swindon housing estate where families who have spent years revolving within our current welfare systems are supported to design their own way out. We spend time with young people who are helped to make new connections - with radical results. We turn to the question of good health care and then to the world of work and see what happens when people are given different tools to make change. Then we see those over sixty design a new and affordable system of support. At the heart of this way of working is human connection. Upending the current crisis of managing scarcity, we see instead that our capacities for the relationships that can make the changes are abundant. We must work with individuals, families and communities to grow the core capabilities we all need to flourish. *Radical Help* describes the principles behind the approach, the design process that makes the work possible and the challenges of transition. It is bold - and above all, practical. It is not a book of dreams. It is about concrete new ways of organising that already have been developing across Britain. *Radical Help* creates a new vision and a radically different approach that can take care of us once more, from cradle to grave.

100 Atmospheres The Meco Network 2019-07-17 *100 Atmospheres* is an invitation to think differently. Through speculative, poetic, and provocative texts, thirteen writers and artists have come together to reflect on human relationships with other species and the planet. **Yemen** Victoria Clark 2010-02-23 “Yemen is the dark horse of the Middle East. Every so often it enters the headlines for one alarming reason or another -- links with al-Qaeda, kidnapped Westerners, explosive population growth -- then sinks into obscurity again. But, as Victoria Clark argues in this riveting book, we ignore Yemen at our peril. The poorest state in the Arab world, it is still dominated by its tribal makeup and has become a perfect breeding ground for insurgent and terrorist movements. Clark returns to the country where she was born to discover a perilously fragile state that deserves more of our understanding and attention. On a series of visits to Yemen between 2004 and 2009, she meets politicians, influential tribesmen, oil workers and jihadists as well as ordinary Yemenis. Untangling Yemen’s history before examining the country’s role in both al-Qaeda and the wider jihadist movement today, Clark presents a lively, clear, and up-to-date account of a little-known state whose chronic instability is increasingly engaging the general reader”--Publisher description.

Cheap Ellen Ruppel Shell 2009-07-02 A myth-shattering investigation of the true cost of America’s passion for finding a better bargain From the shuttered factories of the Rust Belt to the strip malls of the Sun Belt-and almost everywhere in between-America has been transformed by its relentless fixation on low price. This pervasive yet little- examined obsession with bargains is arguably the most powerful and devastating market force of our time, having fueled an excess of consumerism that blights our landscapes, escalates personal debt, lowers our standard of living, and even skews of our concept of time. Spotlighting the peculiar forces that drove Americans away from quality, durability, and craftsmanship and towards quantity, quantity, and more quantity, Ellen Ruppel Shell traces the rise of the bargain through our current big-box profusion to expose the astronomically high cost of cheap.
