Me: a Compendium Wee Society 2016 Inventive, hilarious and joyously colorful, this fill-in journal was designed to help kids capture nearly everything that's uniquely rad about them. With design-savvy, yet completely kid-friendly illustrations, they're asked to draw or write about a bunch of interesting things -- like what their hair looks like, what their band name would be, what they'd bring to outer space, and how they feel about lightning, lizards and pickles. There may or may not be a place for super-secret stuff inside the book jacket. Whether kids complete their entire compendium on a rainy day, or finish it over a year, it'll become a treasure to look back on and smile. Ideal for the holidays, rainy days and happy occasions of all kinds, this is an imagination-building gift will engage kids for hours on end

Using Creativity to Address Dyslexia, Dysgraphia, and Dyscalculia Fredricka K. Reisman 2020 Designed to help educators recognize and nurture students with dyslexia, dysgraphia, and dyscalculia, this book guides readers through best practices for using creativity theory and strategies to address the learning challenges for students who have difficulty in acquiring literacy and mathematics content. Offering concrete examples of creativity assessment and pedagogical techniques, chapters are supported by rich Appendices providing assessment and screening checklists, time-telling objectives, learning trouble spots, a creative approach to teaching place value, and a handy cross-referencing table. Accessible and thorough, this up-to-date guide will help educators develop strategies that acknowledge students' creative strengths to address learning challenges across the literacy and mathematics curricula.

Metaphysics and Hermeneutics in the Medieval Platonic Tradition Stephen Gersh 2020-11-10 Metaphysics and Hermeneutics in the Medieval Platonic Tradition consists of twelve essays originally published between 2006 and 2015, dealing with main trends and specific figures within the medieval Platonic tradition. Three essays provide general surveys of the transmission of late ancient thought to the Middle Ages with emphasis on the ancient authors, the themes, and their medieval readers, respectively. The remaining essays deal especially with certain major figures in the Platonic tradition, including pseudo-Dionysius the Areopagite, Iohannes Scottus Eriugena, and Nicholas of Cusa. The principal conceptual aim of the collection is to establish the primacy of hermeneutics within the philosophical program developed by these authors: in other words, to argue that their philosophical activity, substantially albeit not exclusively, consists of the reading and evaluation of authoritative texts. The essays also argue that the role of hermeneutics varies in the course of the tradition between being a means towards the development of metaphysical theory and being an integral component of metaphysics itself. In addition, such changes in the status and application of hermeneutics to metaphysics are shown to be accompanied by a shift from emphasizing the connection between logic and philosophy to emphasizing that between rhetoric and philosophy. The collection of essays fills in a lacuna in the history of philosophy in general between the fifth and the fifteenth centuries. It also initiates a dialogue between the metaphysical hermeneutics of medieval Platonism and certain modern theories of hermeneutics, structuralism, and deconstruction. The book will be of special interest to students of the classical tradition in western thought, and more generally to students of medieval philosophy, theology, history, and literature.

685810 United States Government Accountability Office 2017-09-23 FMCSA, established within the Department of Transportation in January 2000, is charged with reducing crashes involving commercial motor carriers (i.e., large trucks and buses) and saving lives. IT systems and infrastructure serve as a key enabler for FMCSA to achieve its mission. The agency reported spending about \$46 million for its IT investments in fiscal year 2016. In December 2015, the Fixing America's Surface Transportation Act was enacted and required GAO to review the agency's IT, data collection, and management systems. GAO's objectives were to (1) assess the extent to which the agency has plans to modernize its existing systems, (2) assess the extent to which FMCSA has implemented an IT governance structure, and (3) determine the extent to which FMCSA has ensured selected IT systems are effective. To do so, GAO analyzed FMCSA's strategic plan and modernization plans; compared governance documentation to best practices; selected four investments based on operations and maintenance spending for fiscal year 2016, among other factors, and compared assessments for the investments against OMB criteria; and interviewed officials.

Irishness and Womanhood in Nineteenth-century British Writing Thomas J. Tracy 2009 Using Lady Morgan's The Wild Irish Girl as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's Castle Rackrent through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

Differential Equations Robert P. Gilbert 2021 "This book illustrates how MAPLE can be used to supplement a standard, elementary text in ordinary and partial differential equation. MAPLE is used with several purposes in mind. The authors are firm believers in the teaching of mathematics as an experimental science where the student does numerous calculations and then synthesizes these experiments into a general theory. Projects based on the concept of writing generic programs test a student's understanding of the theoretical material of the course. A student who can solve a general problem certainly can solve a specialized problem. The authors show MAPLE has a built-in program for doing these problems. While it is important for the student to learn MAPLE's in built programs, using these alone removes the student from the conceptual nature of differential equations. The goal of the book is to teach the students enough about the computer algebra system MAPLE so that it can be used in an investigative way. The investigative materials which are present in the book are done in desk calculator mode DCM, that is the calculations are in the order command line followed by output line. Frequently, this approach eventually leads to a program or procedure in MAPLE designated by proc and completed by end proc. This book was developed through ten years of instruction in the differential equations course"--
