**Responsive Regulation** Ian Ayres 1995-02-16 This book transcends current debate on government regulation by lucidly outlining how regulations can be a fruitful combination of persuasion and sanctions. The regulation of business by the United States government is often ineffective despite being more adversarial in tone than in other nations. The authors draw

on both empirical studies of regulation from around the world and modern game theory to illustrate innovative solutions to this problem. Their ideas include an argument for the empowerment of private and public interest groups in the regulatory process and a provocative discussion of how the government can support and encourage industry self-regulation.

### **Rearming the French** Marcel Vigneras

2016-11-29 In October 1942 Maj. Gen. Mark W. Clark, representing the U.S. Army, and Brig. Gen. Charles Mast, spokesman for General Henri Giraud, met secretly in Cherchel, seventy-five

miles west of Algiers. The subject of their conversations was a momentous one—the imminent re-entry of French North Africa into the war. General Clark, acting on instructions from President Roosevelt, gave positive assurances to General Mast that the United States would furnish the equipment necessary to outfit the North African forces. Clark's commitment was timely, for Anglo-American forces were about to land in northwest Africa. More important, it heralded an event of great significance: the forthcoming assumption, by the United States, of direct responsibility for reequipping the French armed forces. The British had been discharging this responsibility by maintaining the small band of Frenchmen stubbornly fighting on their side and under their control since mid-1940. Before World War II had ended, the Americans had fully equipped and trained eight French divisions in North Africa, partially outfitted and trained three more in France, furnished equipment for nineteen air

squadrons, and carried out an extensive rehabilitation program for the French Navy. They had supplied some 1,400 aircraft, 160,000 rifles and carbines, 30,000 machine guns, 3,000 artillery guns, 5,000 tanks and These instructions were relayed in Msg R-2080, Gen George C. Marshall to Lt Gen Dwight D. Eisenhower, 17 Oct 42, CM-OUT 5682. (See Bibliographical Note.) "Clark . . . should state . . . the U.S. will furnish equipment for French Forces which will operate against the Axis." self-propelled weapons, and 51,000,000 rounds of ammunition. An occurrence of historic import was thus re-enacted in reverse. Twice France had similarly undertaken to assist an unprepared America at war. In 1781, in addition to sending an expeditionary corps to help the young colonies in their fight for independence, France supplied weapons and materiel to the infant Continental Army. Much later, in World War I. France, herself at war with Germany, again provided materiel to the American Expeditionary

Forces (A.E.F.) sent to the European continent. In that second episode, the nature and extent of the help rendered were vastly different from what they were to be in World War II. Yet the parallel is striking enough to warrant, for the sake of historical comparison, a brief account of the aid extended by the French to the American forces in 1917-18."

Zoonotic diseases - those caused by pathogens that spread from animals to humans - represent up to 75% of all emerging infectious diseases. Trafficked wild species and the resulting products offered for human consumption, by definition, escape any hygiene or sanitary control, and therefore pose even greater risks of infection.

**Ford Bronco** Todd Zuercher 2019-04-15 GIs returning after World War II created an entirely new automotive market niche when they bought surplus Jeeps and began exploring the rugged backcountry of the American West. This burgeoning market segment, which eventually became known as sport utility vehicles (SUVs), numbered about 40,000 units per year with offerings from Jeep, Scout, Toyota, and Land

Rover. In 1966, Ford entered the fray with its Bronco, offering increased refinement, more power, and an innovative coil-spring front suspension. The Bronco caught on quickly and soon established a reputation as a solid backcountry performer. In Baja, the legendary accomplishments of racers such as Parnelli Jones, Rod Hall, and Bill Stroppe further cemented the bobtail's reputation for toughness. Ford moved upstream with the introduction of the larger Bronco for 1978, witnessing a huge increase in sales for the second-generation trucks. The Twin Traction Beam front end was introduced in the third generation, and further refinements including more aerodynamic styling, greater luxury, and more powerful fuel-injected engines came on board in the generations that followed. Through it all, the Bronco retained its reputation as a tough, versatile, and comfortable rig, both on and off the paved road. With the reintroduction of the Bronco for 2020, Ford is producing a vehicle for a whole new generation

of enthusiasts that looks to bring modern styling and performance to the market while building on the 30-year heritage of the first five generations of the Bronco so dearly loved by their owners. From the development process and details of the first trucks through the 1996 models, author Todd Zuercher shares technical details, rarely seen photos, and highlights of significant models along with the stories of those people whose lives have been intertwined with the Bronco for many years. This book will have new information for everyone and will be a must-have for longtime enthusiasts and new owners alike! p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial; color: #000000}

### *Integration of the Armed Forces, 1940-1965*

Morris J. MacGregor 2020-06-18 "In the quarter century that followed American entry into World War II, the nation's armed forces moved from the reluctant inclusion of a few segregated Negroes to their routine acceptance in a racially integrated military establishment. Nor was this

change confined to military installations. By the time it was over, the armed forces had redefined their traditional obligation for the welfare of their members to include a promise of equal treatment for black servicemen wherever they might be. In the name of equality of treatment and opportunity, the Department of Defense began to challenge racial injustices deeply rooted in American society. For all its sweeping implications, equality in the armed forces obviously had its pragmatic aspects. In one sense it was a practical answer to pressing political problems that had plagued several national administrations. In another, it was the services' expression of those liberalizing tendencies that were permeating American society during the era of civil rights activism. But to a considerable extent the policy of racial equality that evolved in this quarter century was also a response to the need for military efficiency. So easy did it become to demonstrate the connection between inefficiency and

discrimination that, even when other reasons existed, military efficiency was the one most often evoked by defense officials to justify a change in racial policy."\_x000D\_ Morris J. MacGregor, Jr., received the A.B. and M.A. degrees in history from the Catholic University of America. He continued his graduate studies at the Johns Hopkins University and the University of Paris on a Fulbright grant. Before joining the staff of the U.S. Army Center of Military History in 1968 he served for ten years in the Historical Division of the Joint Chiefs of Staff.
